

Topic: Reading and Writing into files

We discussed how to read from and write to the file in C++. In this recitation activity, you are given a *word_list.txt* in the Recitation2.zip folder(downloaded from canvas). *word_list.txt* contains duplicate words. Your task is to read the file and remove all duplicates i.e output each word only once into *output.txt* file. Give the final count of unique words.

Example:

Input file contains

Apple

Kiwi

Banana

Kiwi

Output file contains

Apple

Kiwi

Banana

3

Additional Requirement:

Do not hard code input or output file's name in the CPP program. Use command-line to take input

Try to Modularize your program by calling different function
